

## WE THE AMERICAN MARTIANS

This tome explores the socioeconomic and political milieu that will confront the first settlers on Mars, and the transition from a technocratic to democratic society, replete with the predispositions of the distant Founding Fathers and the directives of their earthly predecessors. The Big One had decimated California and its aftershocks crippled most of the American States, leading to a ramped-up exodus to Mars that found the astronauts and military soon followed by the medics and millionaires. A lottery allowed others fit and functional to journey where only the few had gone before, ultimately to reside in domed communities consistent with their capabilities. Ten other nations followed suit, with their own enclaves on The Red Planet, and the transplantation of earthly values came with one and all. Earlier than expected within the extended colony of the United States, the quests for power and utility of capitalism overwhelmed the exploratory ideals, and this fictional account speaks to the issues and processes of that transformation.
